### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 10-18 and 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Teraji et al (US Patent Application Publication 2001/0022168). This reference teaches a controlled auto-ignition engine wherein a first injection occurs during an intake stroke and a second injection occurs during the latter half of the compression stroke. From Fig. 13, one can see that at lower engine loads, the percentage of first injection fuel quantity is less than 50 percent and falls within applicant's claimed range. See also paragraphs 122, par. 138 and 139.

# Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Application/Control Number: 10/611,366

inition individual to of 1,50

Art Unit: 3747

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 6-9,19-21 and 25-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Teraji et al. in view of Kakuho et al (US Patent Application Publication 2002/0046741).

Teraji et al applies as above, but does not disclose whether EGR is used in his engine. Teraji does disclose (paragraph 6) that a certain amount of residual gas (as in internal EGR) is desirable to promote auto-ignition. Kakuho et al teach a controlled auto ignition engine having a split injection mode and wherein exhaust gases are trapped within the combustion chamber (internal EGR) to aid in controlling the auto-ignition. It would have been obvious to one of ordinary skill in the art to have included some form of EGR in Teraji et al's engine, whether internal or external EGR, as taught by Kakuho et al, (both are commonly known, as already admitted in applicant's specification) so as to regulate the temperature within the combustion chamber of Teraji and thereby control the auto-ignition better. Also inherently during the intake stroke a vacuum occurs in the combustion chamber. Although the actual vacuum pressure in Teraji is not known it is believed that the claimed vacuum falls within a range common to engines.

## Response to Arguments

5. Applicant's arguments with respect to claims 1-28 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/611,366 Page 4

Art Unit: 3747

#### Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erick R Solis whose telephone number is (571) 272-4853. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on (571) 272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
